

SECURE DIGITAL Wireless Intercom System

KEEPS YOUR CONVERSATIONS

PRIVATE

This WireFree Intercom System is the only system of its kind that has multiple types of intercoms for different needs, is truly 100% wireless, is secure from neighboring systems, and it sets up private conversations even within your own network of intercoms.

This system eliminates the hassles of installing intercoms in your home or business. To get your system up and running, all you have to do is install batteries and go through a quick "Learn" procedure and your intercom system is ready to use. No expensive wiring needed!

The WireFree wireless transmits and receives using digital wireless signals that provide high quality, secure audio communication at up to a 1000 foot range (maximum range is only achieved with no obstructions or interference between units).

These intercoms use a digital "spread-spectrum" technology that enables you to set up a private communication network. Even if your neighbors have the same system, they won't hear your conversations.

Another advantage of this digital technology is that you can page all intercoms in your network, but then only speak to the responding station with a private, secured link. Or you can set the units in Conference mode so all stations hear the conversation.

You can also expand your wireless intercom system with other components like the Indoor/Outdoor Intercoms or the Doorbell Intercom System. All of the WireFree components are compatible with each other in any combination.

Use either the Indoor/Outdoor Intercoms or Doorbell Intercom at your front door to talk to visitors...or to get rid of a pesky door-to-door

sales person without having to talk to them face to face.

Since the outdoor intercoms only have one large button and they are loud, they work well for caregiving to the elderly or disabled. One button also means children can't change anything so you can use these units for communicating with children too.

Most wireless intercom systems on the market are not truly wireless since they require the user to plug them into an AC outlet. The WireFree wireless intercom system runs up to one year on just four AA batteries without ever being turned off! Other wireless battery powered intercom systems have short battery lives...therefore they have a high cost of operation.

Some "wireless" systems not only require AC adapters, but they use the wires in your house or business to transmit voice. These systems are highly prone to interference, buzzing noise, poor quality audio, and are not secure. Plus, other people with a similar unit who are on the same AC circuit as you can listen in to your conversations. The WireFree system doesn't communicate over house wiring.

Features:

- 4-channel wireless intercom system
- Transmission range is up to 1000 feet between units
- Multiple simultaneous conversations using 900MHz secure radio digital link
- Connections are digital and fully secure
- Two-way digital wireless voice communication
- Expansion with additional units (up to 12 per network) can enhance your communication to multiple locations
- Up to 1-year battery life; requires four AA batteries per unit (not included)
- Intercom emits beeps when batteries are low
- Paging function enables you to broadcast to all the stations in the location, and then speak to the responding station privately with a private, secured link
- Conference mode enables you to communicate with all of the intercom stations in the network at the same time.
- Volume control
- Setup is extremely simple and can be done in under 2 minutes
- All units can be wall mounted or surface mounted
- Digital Spread Spectrum Technology for security and immunity to interference.
- 1 year manufacturer's warranty

We bought the WireFree Intercom for use between our nurse's stations in a physician clinic. We like them because they are small, easy to maintain, have long battery life, and they have no annoying wires. They are also so easy to use and they save us from yelling and making unwanted trips. Thank you for a quality product! Marny Hammond - Paoli, IN

I like these intercoms because they are easy to install and they let me talk in a normal voice instead of shouting at the kids upstairs. I also don't have to climb the stairs to wake my grand kids to get ready for school. If they need me its easy for them to let me know. I know they are safe, and they can feel safe knowing I can hear them if they need me. I am enjoying the intercoms very much. Any time I buy something and I don't feel like I got ripped off, I love bragging about the product. Virginia Marlow - Jefferson, GA

These units are fantastic for a quick to install and easy to operate system. For security, we keep some of our doors locked but still need to receive deliveries and visitors. We have a number of RF obstructions on our floor (several RF shielded rooms and big metal coldroom) that interfere with most cordless devices, but these units work flawlessly everywhere we have used them. The system has been in place for just over one year now and we have no complaints. Biophysics Geek from Nashville, TN

WireFree Intercom System Applications

- Home
- Camping
- Boating
- Office
- Elderly/Handicapped
- Playground
- Pool
- Workshop
- Construction Sites
- Horse Barn
